

Lithuania

Lithuania is a **Moderate innovator**. Despite some fluctuations the overall innovation performance has been improving since 2007. The performance relative to the EU has also been improving in the last few years, and although there has been a slight decline in 2014, the performance is above the 50% threshold value between being a Modest or Moderate innovator.

Lithuania performs below the average of the EU for most dimensions, except for Human resources and Finance and support. Relatively worst performing indicators are Non-EU doctorate students, PCT patent applications in societal challenges, License and patent revenues from abroad and PCT patent applications. Performance above average is observed for Non-R&D innovation expenditures, Population with completed tertiary education and Youth with upper secondary level education.

Particularly high growth is observed for License and patent revenues from abroad (61%), but also Community trademarks (18%) and Community designs (18%) show high growth. The largest performance declines are for PCT patent applications in societal challenges, Sales share of new innovations and Non-EU doctorate students.

Notes: Performance relative to the EU where the EU = 100. No data for Venture capital investments.
