ReproTracker: Human Stem Cell-Based Biomarker Assay for Screening of Developmental Toxicity

EPAA meeting- 15/11/2022

Toxys B.V.  
Leiden, The Netherlands

Brussels, 5.2.2020  
COM(2020) 16 final

**REPORT FROM THE COMMISSION TO THE EUROPEAN PARLIAMENT AND THE COUNCIL**

**2019 report on the statistics on the use of animals for scientific purposes in the Member States of the European Union in 2015-2017**

{SWD(2020) 10 final}

Scientists hearing for the first time about the regulatory process for NAMs validation

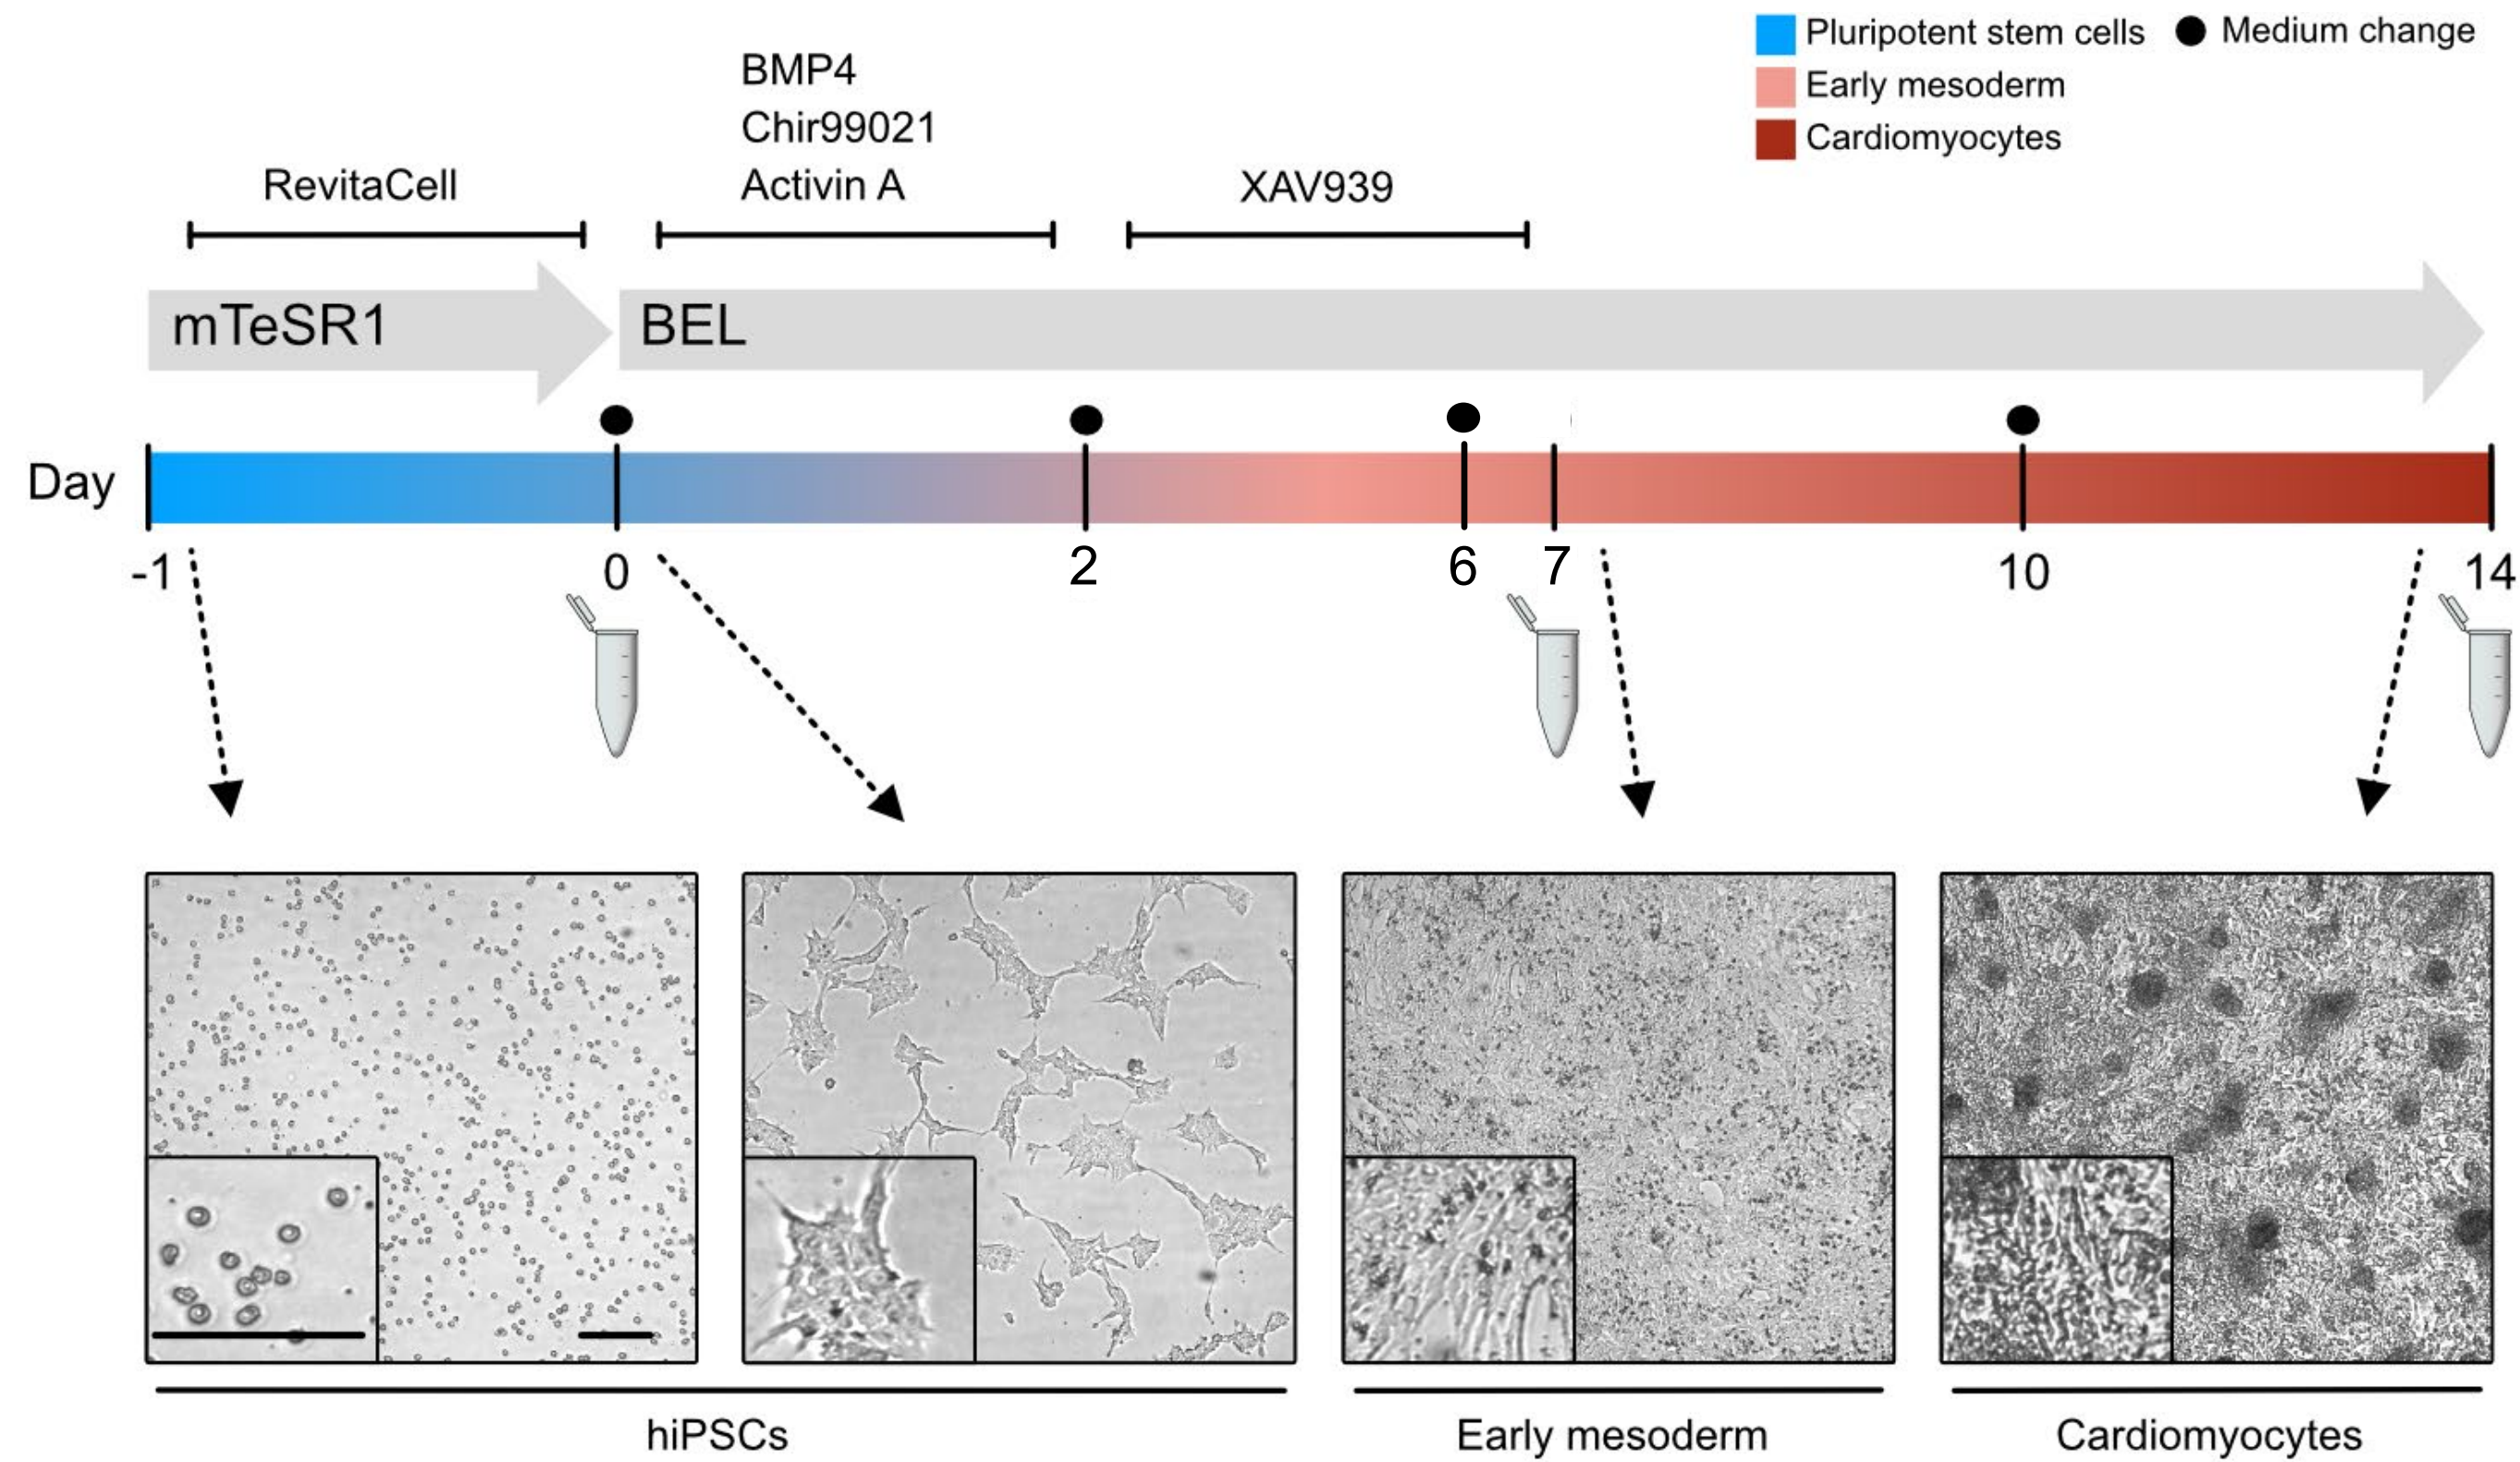

Batch pots

## Key features:

- Human test system
- *In vitro* development of functional heart, liver and neural tissues
- Visualization of the key cellular events of early embryonic development
- Detect disruption of developmental program based on morphological and molecular read-out

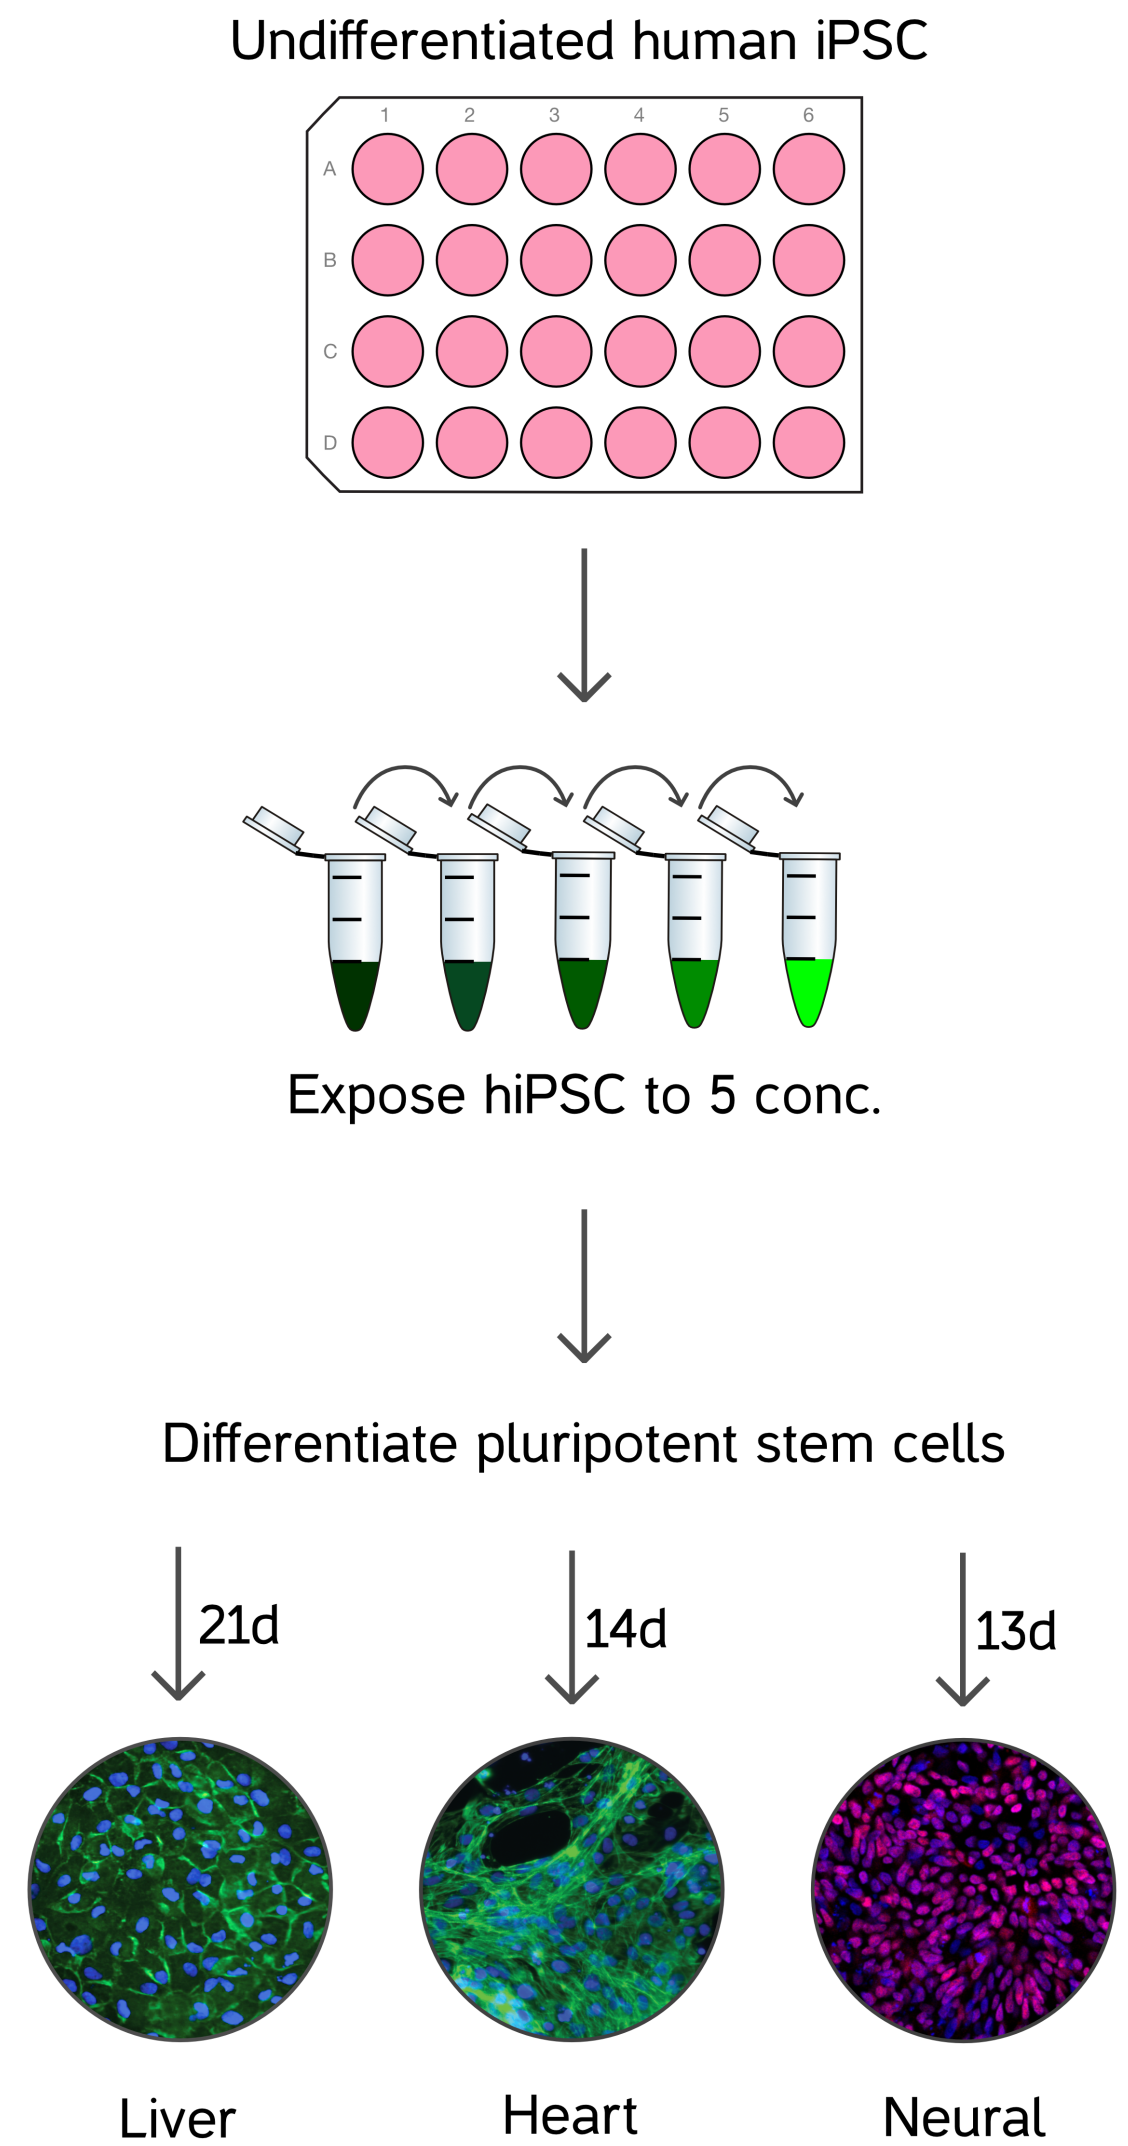

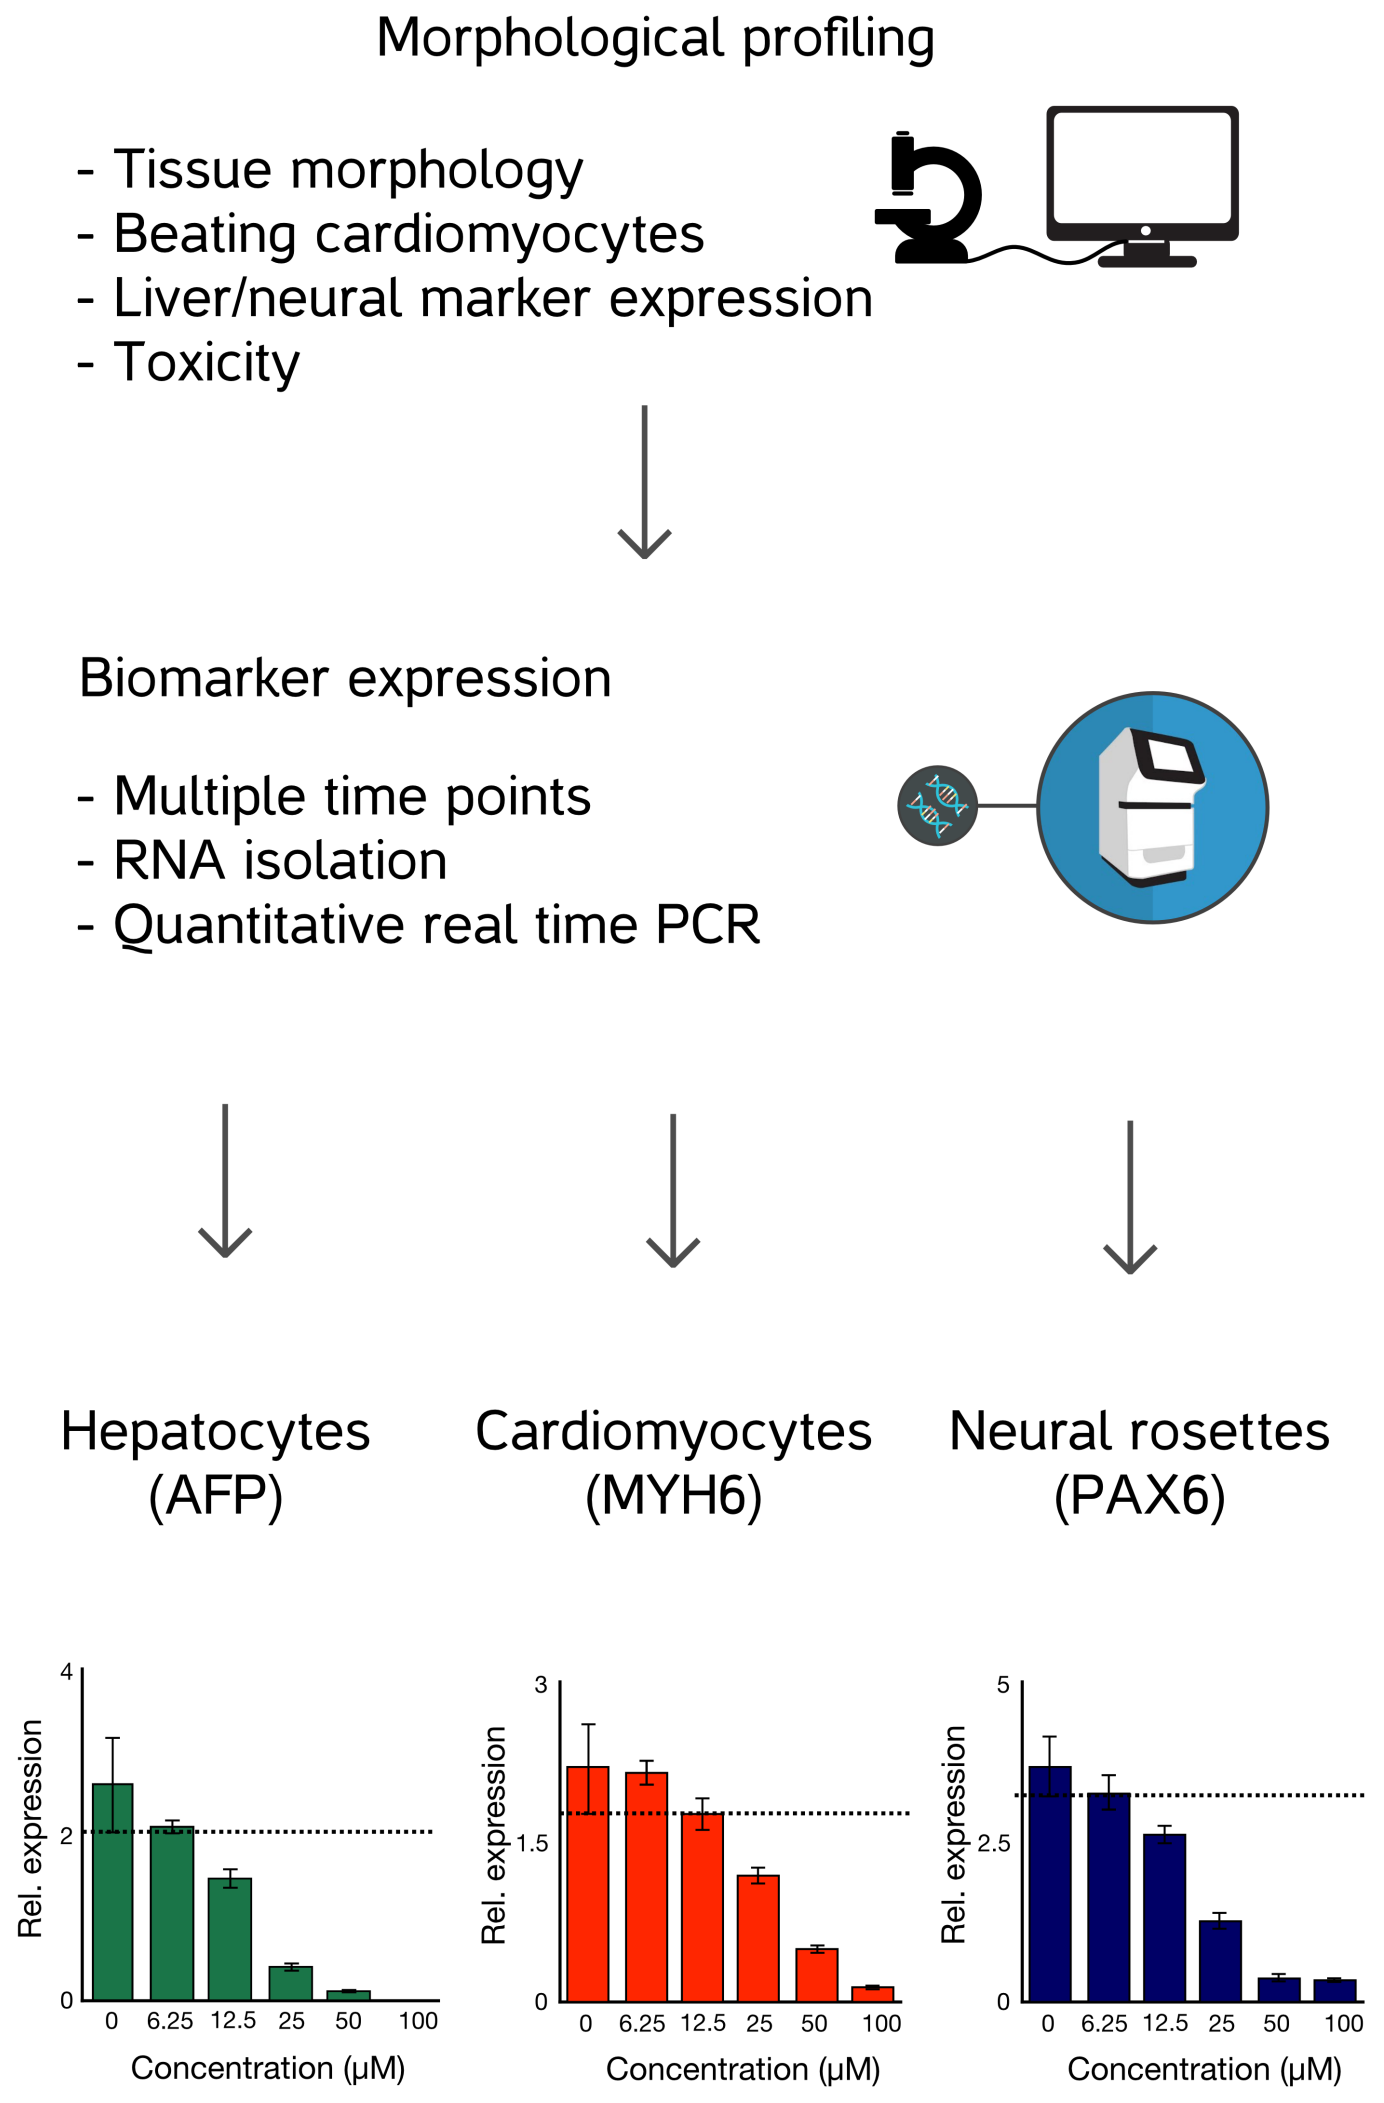

## 1. Dose range finding

## 2. Stem cell differentiation

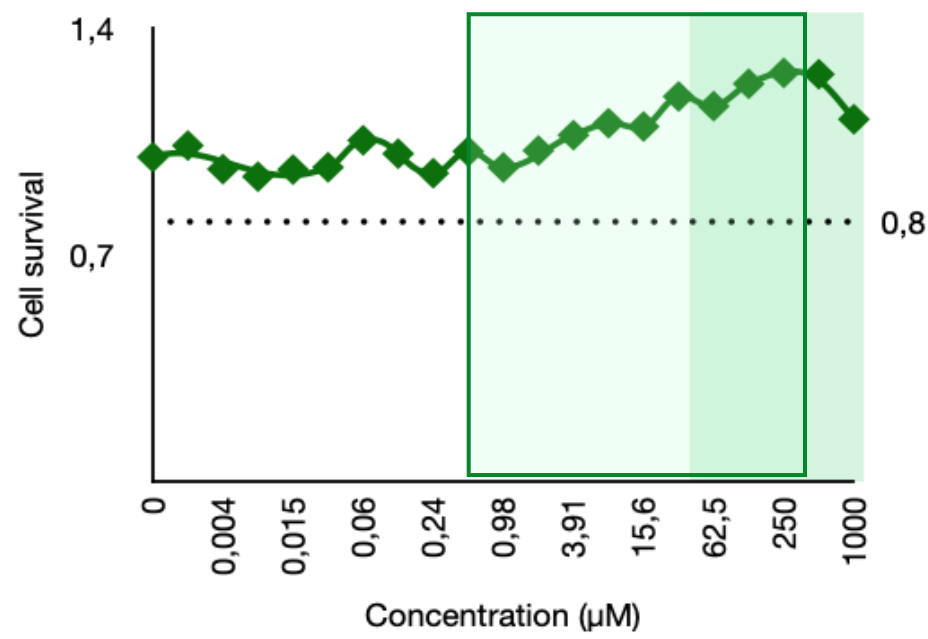

## 3. Biomarker analysis

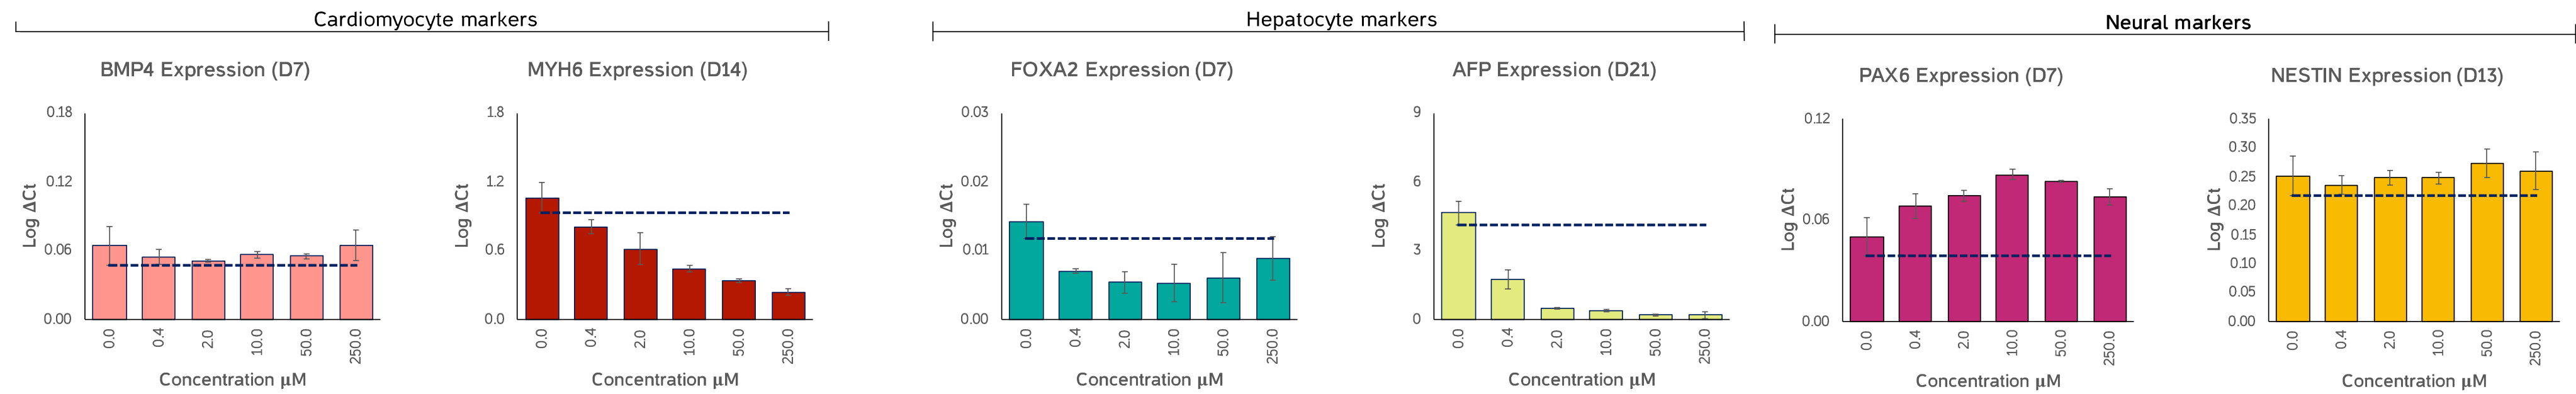

## Dose selection

Dose selection: thalidomide

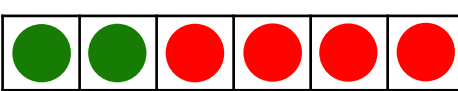

**Clinically relevant concentration is between 1-6 µM**

## Biomarker analysis

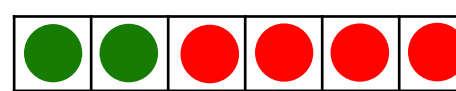

## Morphology analysis

## Dose selection

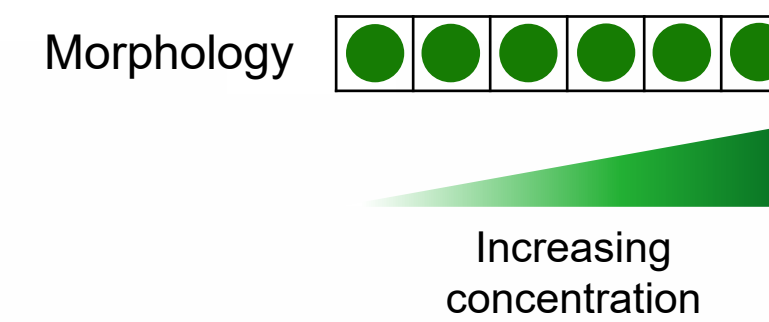

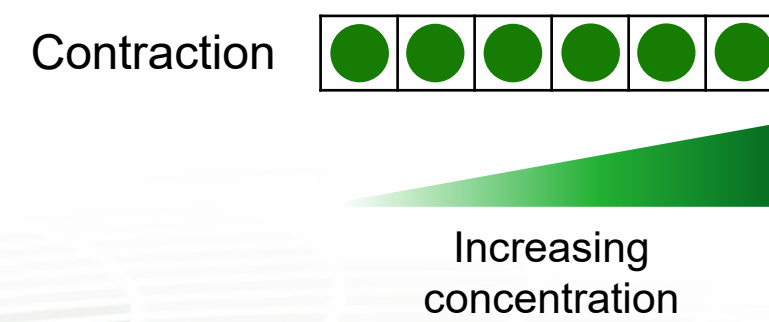

## Biomarker analysis

## Morphology analysis

**Clinically relevant concentration is 1.5 μM**

# Extended validation of the ReproTracker assay

- > 100 compounds have been tested so far
- Validated with ICH S5 and EURL ECVAM-suggested libraries of teratogens and non-teratogens

Model system	Model accuracy (%)	Reference
ReproTracker	85%	A. Jamalpoor et al., 2022
Mouse EST	78%	A. Seiler et al., 2011
Whole Embryo Culture	68%	K. Augustine-Rauch et al., 2010
Micromass	70%	I. Wilk-Zasadna et al., 2009

EUROPEAN MEDICINES AGENCY

Committee for Human Medicinal Products

ICH S5 (R3) guideline on reproductive toxicology:  
detection of toxicity to reproduction for human  
pharmaceuticals

## ReproTracker as a late phase verification test for animal testing outcomes

Compound	Therapeutic Cmax ( $\mu\text{M}$ )	FDA label	Humans	Rodent	Rabbit	mEST	WEC	True classification	ReproTracker classification
Sitagliptin	1	B	Green	Red	Green	n.d.	n.d.	Green	Green
Thalidomide	1-6	X	Red	Green	Red	Green	Red	Red	Red
Warfarin	25	X	Red	Red	Green	Green	n.d.	Red	Red
Imatinib	2-4	D	n.d.	Red	Green	n.d.	n.d.	Red	Red
Bosentan	2	X	n.d.	Red	Green	n.d.	n.d.	Red	Red

- ReproTracker utilizes human material (hiPSCs) and hence can be more predictive of responses in humans.
- ReproTracker can resolve the outcome differences in animal testing.

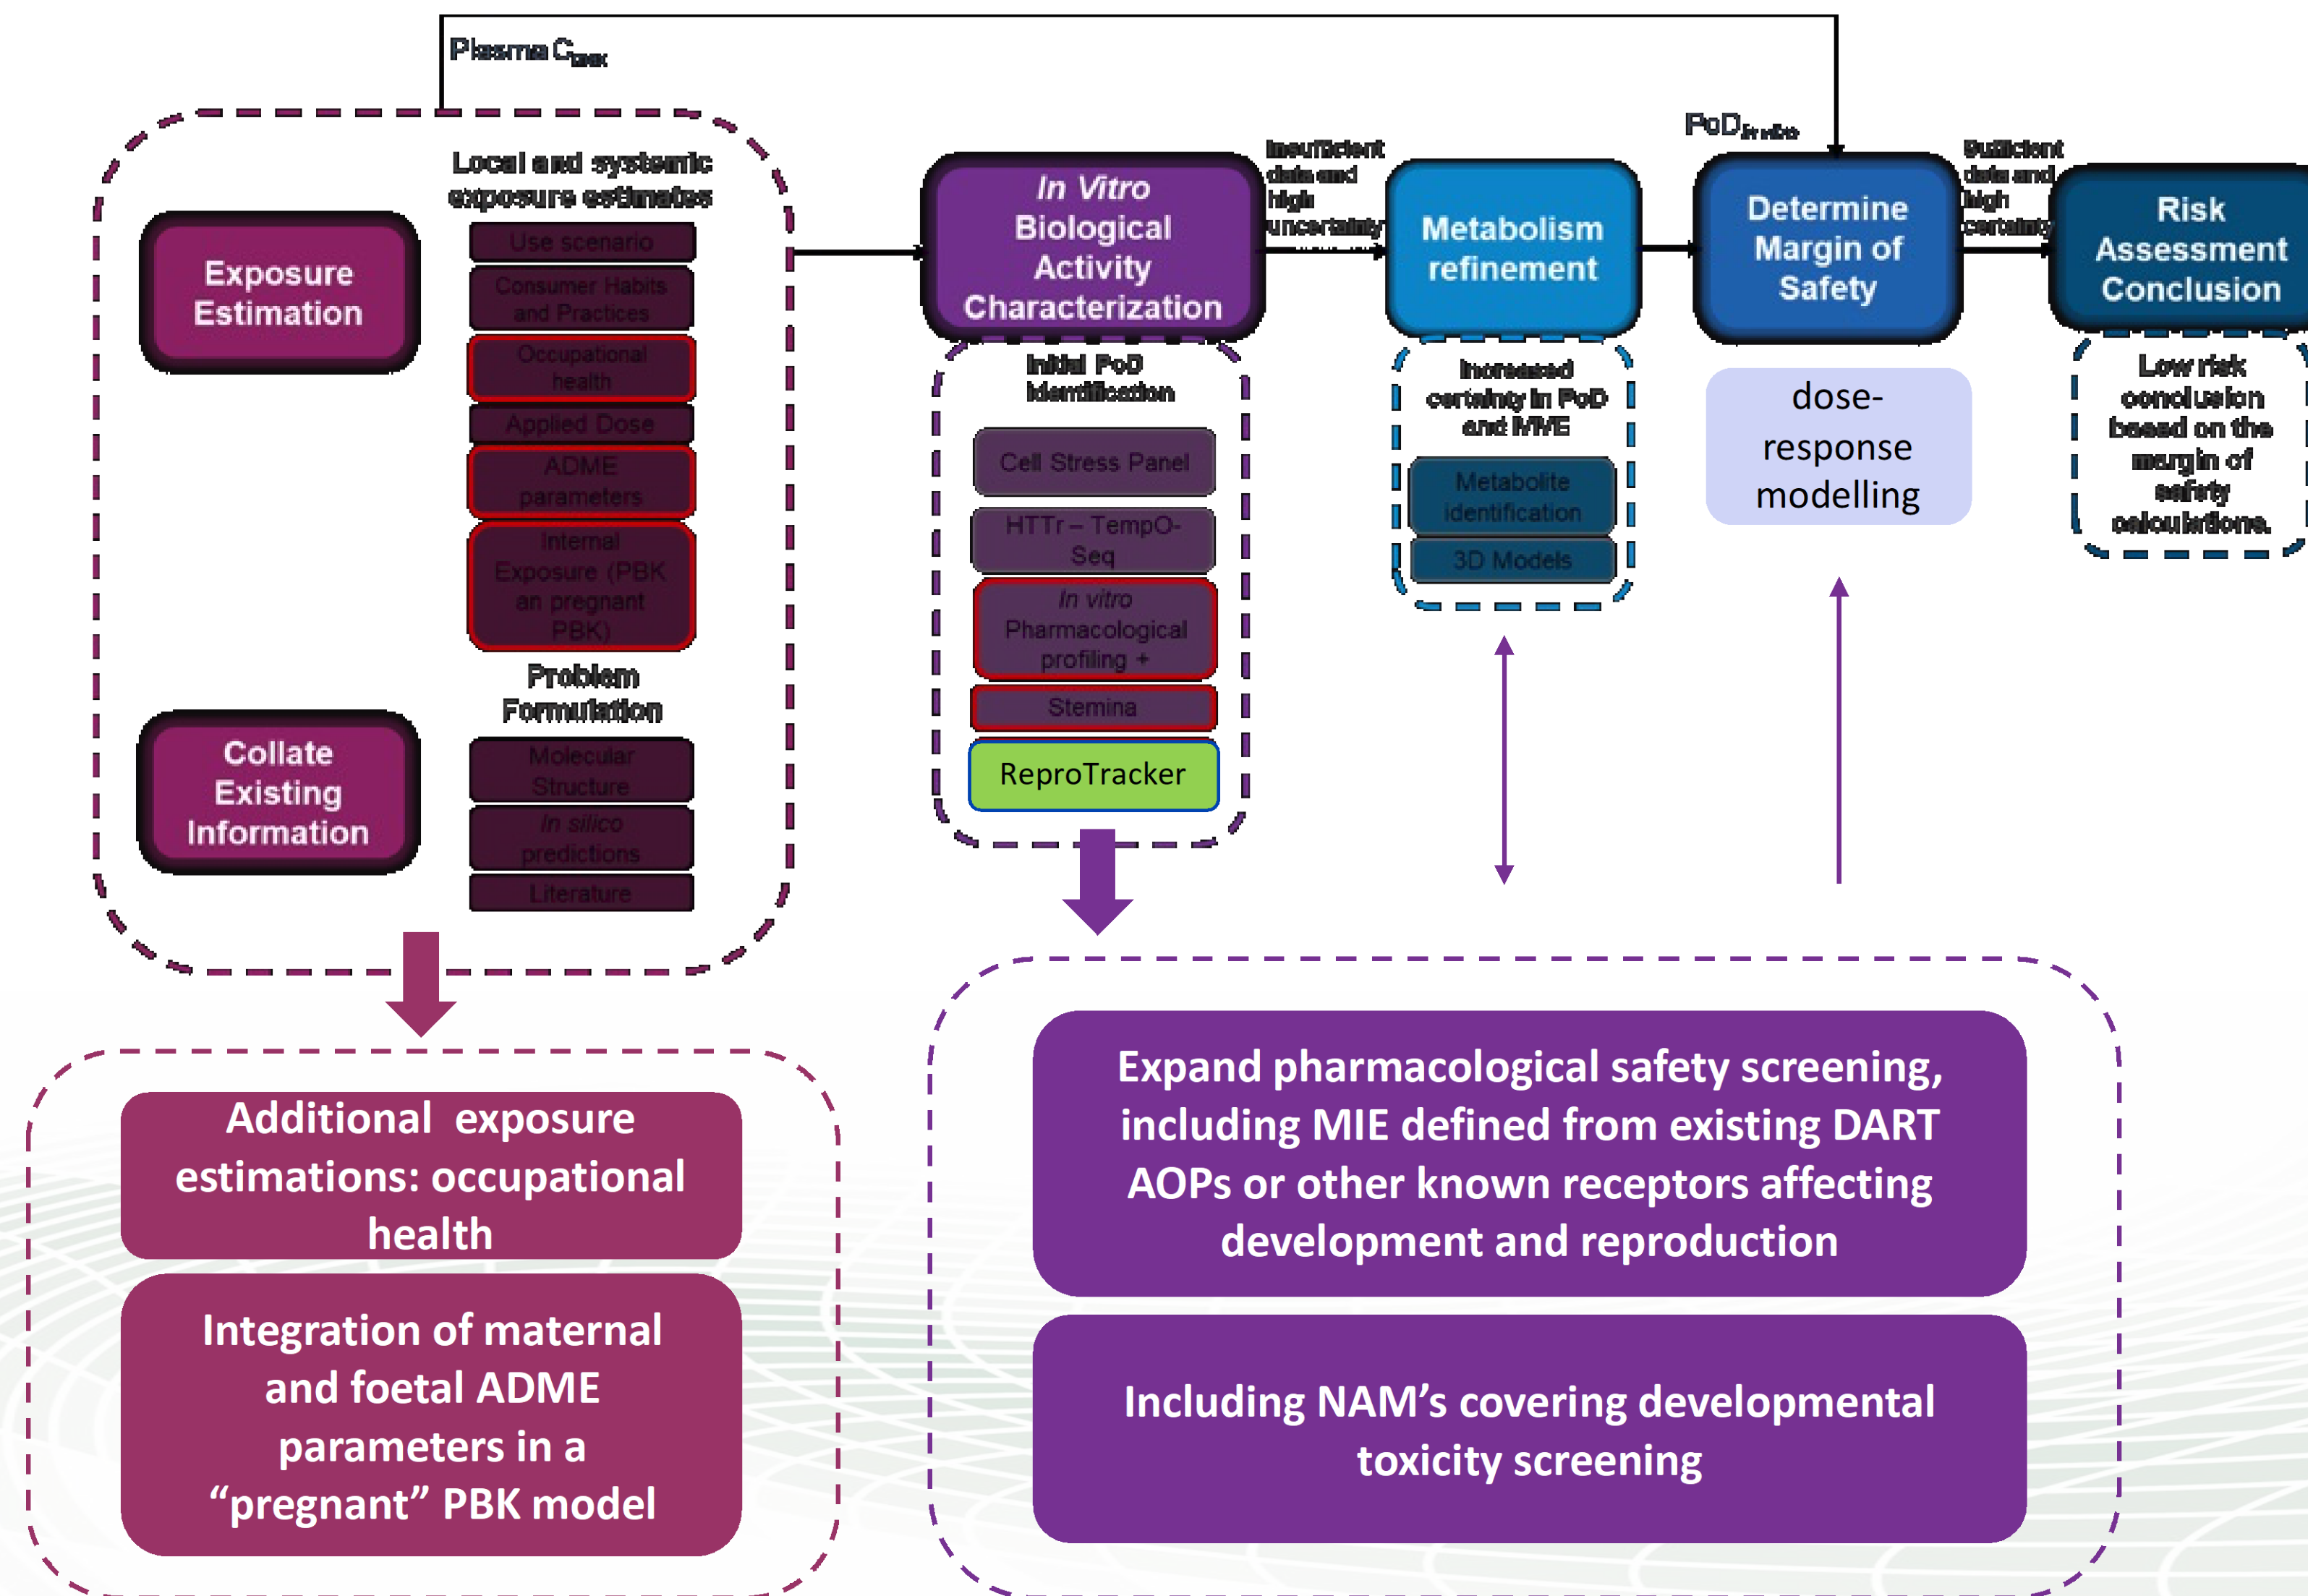

- PKPB models
- Placenta transfer
- Cell viability

- Hepatocytes
- Cardiomyocytes
- Neural rosette
- Osteoblasts

- Omics technologies
- POD
- IVIVE
- AOP mapping

- Increase confidence in predictive value of exposure informed in vitro developmental toxicity assay
- Increased experience among industry and regulatory in interpretation and evaluation of in vitro data
- Reduction in use of animals
- Replacement of 2nd animal species

**Integrating *ReproTracker* endpoints into Unilever's NGRA framework.**

(Rajagopal et al., *Front. Toxicol.*, 07 March 2022 <https://doi.org/10.3389/ftox.2022.838466>)

- Human stem cell-based test system
- Combines functional/morphological profiling and expression pattern of selected biomarker genes
- Biomarker based approach – a way to understand biological responses
  - Insight into the molecular mode of action and key events
  - Time-window sensitive gene-biomarkers

## **Predictability of ReproTracker assay**

- Sensitive enough to predict compounds' adverse effects on early embryonic development
- Potency ranking

## **Applicability**

- As part of early drug development phase
- Alternative for animal-free teratogenicity testing of chemicals
- Investigate the mode-of action of teratogenic compounds
- Extrapolate animal-derived results to humans
