

# A strong European policy to support Small and Medium-sized enterprises (SMEs) and entrepreneurs 2015-2020

## Public consultation on the Small Business Act (SBA)

Fields marked with \* are mandatory.

### Introduction & background

---

Since its adoption in 2008, the Small Business Act (SBA) has proven its worth as a policy tool in support of the small and medium enterprises (SMEs). Various initiatives have been taken at both EU and national level to improve the environment in which these businesses operate and help them grow.

It is now time to reflect on what can be done in the years that lie ahead to make life easier for SMEs.

The Commission has drafted a consultation document including the on-going measures and the new proposals (see the link below).

This consultation is designed to collect feedback on the new initiatives set out in the consultation document.

**Please read it before you complete the questionnaire.**

The vast majority of SMEs have substantial competitive disadvantages in terms of reporting, intrinsic risk, financial sophistication and external visibility. Mechanisms to reduce these disadvantages (such as specialised support entities) would be very useful in offering them greater capacity for diversification of sources of funding.

The EBF believes that SMEs' access to financing should be an absolute priority in the debate on long-term financing. A significant percentage of SMEs in each Member State is in financial difficulty, often causing them to be unsuitable for additional credit. With the erosion of SMEs' capital base, due to the recession, many SMEs have become unbankable. Banks are now compelled to price risk appropriately to avoid the excesses of the pre-crisis days.

There is an urgent need for new instruments (equity capital, credit guarantee schemes, etc.) in addition to traditional bank finance that are in sync with the current and specific financing needs of many SMEs. More than 90% of SMEs are dependent on domestic demand but in a number of Member States, the combination of recession, austerity programmes and overall lack of consumer confidence continue to constrain domestic demand. At best, this leads to some credit demand for working capital but also to a complete risk aversion around credit demand for investment. In these countries, banks are bound to reject a number of credit applications owing to the poor balance prospects and the high risk of repayment failures.

Use of rating services, legal certification of accounts, support services on market access and investment in the recapitalisation of companies would substantially mitigate SMEs' funding difficulties.

## 4 - Promoting market access for SMEs

The EBF is pleased to see the recent political willingness to revive the European securitisation market. Securitisation presents numerous benefits, both for banks and non-banks, and plays an important role in financing the real economy.

Nevertheless, SMEs in Europe are mainly funded by banks. This situation will not change in the medium term as SMEs need to be equity based to access to capital markets. In this regard, SME lending can be severely affected by the Basel III rules in some EU jurisdictions where SMEs do not fund themselves through capital markets but by banks.

The reactivation of the credit securitisation market in the EU should be encouraged by better coordination between the different provisions of Basel III and Solvency II and the development of a securitisation market based on simple structures and low-risk assets (reducing the opacity of originate-to-distribute models). Under current proposals, banks will be forced to increase capital, deleverage, and change the mix of assets they have available, to meet regulatory standards. Consequently, they are likely to reduce their exposure to securitised products even further.
